

Epping Road Water Tank

The Epping Road tank was completed in 2008 to replace the previous storage tank in the area. The older tank was constructed in the 1950s to meet the growing water needs of the town. In recent reports a new Epping Road Storage Tank was identified as a way to once again improve Exeter's water supply system.

The new Epping Road water tank is a 1.5 million gallon water capacity standpipe used primarily for town drinking water and fire protection services. This new tank provided an increase to water pressure available to the Town and to the Fire Department.
